This is the second weekly report designed to inform CAC board and staff, as well as CAC members and the general public regarding our activities and work during the 2020 Indiana General Assembly.

CAC staff attended multiple hearings and coalition meetings this week. We’re following more than forty bills with more legislation continuing to appear through the public process as we speak. By the week’s end 912 separate pieces of legislation had been filed including 457 Senate bills and 455 House bills.

Much of the Statehouse was centered on Governor Eric Holcomb’s fourth State of the State speech Tuesday night.

We were disheartened again when Governor Holcomb failed to name clean energy and lowering utility bills a policy priority for his administration. He said nothing about the clean energy revolution and instead claimed Indiana’s water and air quality have never been better despite routine rankings as some of the worst air and worst water quality in the nation.

The Senate Utilities Committee met and discussed a water and wastewater utilities bill, Senate Bill 254. The bill is designed to extend the authority to the utilities to charge captive customers the costs related to health and safety concerns, primarily water contaminants like PFAS.

We had concerns with how broad and generous the tracker was in the introduced bill. However, there was an amendment adopted in Committee which mostly addressed our concerns and we ultimately supported the bill. The legislation and committee hearing was covered by Indiana Public Media in their story “Bill Would Help Smaller Utilities Address Lead In Drinking Water.”

We testified in House Environmental Affairs this week on, among other bills, the Committee will hear House Bill 1265, which will require schools to test for lead in their drinking water. Lead can get in the water from pipes and fixtures, especially in older school buildings. While the bill was not voted on, we encouraged the committee to support the bill and thanked Rep. Carolyn Jackson (D-Hammond) for her authoring the bill. The Committee also discussed House Bill 1297 by Rep. Pat Boy (D-Michigan City). HB 1297 seeks to improve notification requirements when toxic chemical spills occur. These releases have been in the news quite a bit in the last year. Rep. Boy’s bill will expand penalties for failure to properly notify downstream interests and water users. No action was taken on HB 1297 but we expect the topic to reappear in future meetings of the committee, perhaps in the form of House Bill 1337 by Rep. Ryan Hatfield (D-Evansville).

The House Utilities Committee will likely meet on Wednesday. It is expected that among other bills, the Committee will hear House Bill 1274, otherwise known as the coal bailout bill. It has already been widely reported by the Indianapolis Business Journal, Indiana utilities would be prevented from shutting down coal-fired plants under new bill. Take action on the Coal Bailout Bill by emailing your legislators here.

The Senate Utilities Committee will meet on Thursday and hear “Senate Bill 415,” a home bill which would provide a tracker to the electric utilities to charge captive customers the costs related to leasing excess bandwidth capacity to telecommunications carriers. Last time we visited, electric consumers pay for assets necessary to provide electricity, not broadband services.
